

EXPERIENCE

SOFTWARE ENGINEER | Leanqubit | Remote

Nov 2025 – Apr 2026

FactoPlan | Smart Production Planning & Scheduling

- Developed complex dashboard screens integrating multiple APIs to surface planning data across the application.
- Resolved UI issues and closed a backlog of open bug tickets, improving overall product stability.

FactoMES | Real-time Manufacturing Execution System

- Contributed to a UI redesign of the product, rebuilding key screens with a consistent design system.
- Implemented and managed Redux-based state management across redesigned screens to handle complex application state.

FactoVision | Production Count & Quality Inspection

- Contributed to UI development, building and maintaining screens and components as part of the core product team.
- Resolved UI bugs and addressed open tickets to improve product quality and user experience.

Platform Consolidation

- Led frontend architecture for merging FactoVision, FactoMES & FactoPlan into a single unified platform ahead of the team's transition, establishing shared state management (Redux) and REST API integration standards across all three products.
- Handled API binding across the consolidated platform, connecting frontend screens to backend services and verifying data flow across all three products.
- Built a reusable React.js/TypeScript component library styled with Tailwind CSS, standardizing UI patterns across the merged platform and reducing duplicate component work across product lines.
- Conducted testing across the unified application, implementing a Jest unit testing framework to improve code quality and catch issues before release.

INTERNSHIP

FRONTEND DEVELOPER | Moon Light | Remote

Jan 2025 – Apr 2025

- Built a React Hooks and Context API component system that cut frontend development effort by 30%, based on sprint velocity comparisons.
- Integrated REST APIs with structured error handling and fallback states, reducing QA-reported issues.
- Contributed to a responsive, maintainable frontend architecture focused on usability and performance.

PROJECTS

AI AGENTIC HABIT TRACKER | Stack : Next.js, FastAPI, LangChain, Grok API, PostgreSQL

- Developed a full-stack AI-powered habit tracking platform that generates personalized habit plans and adapts recommendations based on user activity patterns.
- Architected a LangChain-based agent workflow integrated with Grok API, enabling autonomous habit planning, real-time adjustments, and feedback-driven routine optimization.
- Designed scalable backend services with FastAPI and PostgreSQL to manage user data, habit history, and AI-generated recommendations efficiently.

LANGUAGES & TECHNOLOGIES

LANGUAGES	TypeScript, JavaScript, Python, SQL, HTML5, CSS3
FRONTEND	React.js, Next.js, Redux/Redux Toolkit, Tailwind CSS, Jest, Component Libraries & Design Systems
BACKEND & APIS	Node.js, Express.js, FastAPI, REST APIs, JWT Authentication, RBAC, Prisma ORM
DATABASES	PostgreSQL, MongoDB, MySQL
AI / LLM	LangChain, Grok API, LLM Integration, Agentic Workflows
TOOLS	Git/GitHub, Postman, Figma, Netlify

EDUCATION

BACHELOR'S DEGREE | Artificial Intelligence & Machine Learning | Mumbai University | 2025

ACHIEVEMENTS

BEST RESEARCH PAPER AWARD | 4th International Conference on Engineering Excellence — for research on decentralized document verification using blockchain and IPFS.

STUDENT COMMITTEE CORE | built a 100+ member technical community; organized 8+ workshops and hackathons across frontend, backend, and AI/ML.

DESIGN LEAD | technical newsletter (500+ subscribers) — owned layout, typography, and information architecture.

CERTIFICATIONS

DATA ANALYSIS USING PYTHON | Anudip Foundation, Mumbai Suburban

FULL-STACK WEB DEVELOPER | LinkedIn Learning

REACT JS DEVELOPMENT | GeeksforGeeks
